EDUCATION

Virginia Tech — Falls Church, USA
Ph.D. Student in Computer Science — *Jan. 2019 – May 2024*
- Research Areas: Uncertainty Analysis, Image/Text Understanding, Image Manipulation
- Overall GPA: 3.95/4.0

University of Pittsburgh — Pittsburgh, USA
Ph.D. Student in Computer Science (Transferred to Virginia Tech) — *Aug. 2018 – Dec. 2018*
- Admitted with first-year fellowship scholarship

University of Chinese Academy of Science — Beijing, China
Master in Computer Technology — *Sep. 2014 – Jul. 2017*
- **Admitted with exam exemption** • Rank: Top 2

Institute of Computing Technology, Chinese Academy of Sciences — Beijing, China
Visiting Student in Group of Visual Information Processing and Learning — *Jul. 2015 – Jul. 2017*

Central China Normal University — Wuhan, China
Bachelor in Digital Media Technology — *Sep. 2010 – Jun. 2014*
- Rank: 2/43

Planned First-Author Works Before Ph.D. Graudation (May-2024)

[16] Uncertainty Estimation on Named Entity Recognization by Evidential Neural Network. It will be submitted to **ICLR** 2024 by Sep. 2023.

[17] SiCF Score: Uncertainty Estimation for Dialogue Summarization. It will be submitted to **ICLR** 2024 by Sep. 2023.

[18] A Survey: Uncertainty Estimation Models and Applications in Natural Language Understanding And Generation. It will be submitted to a journal.

[19] A Benchmark of Uncertainty Estimation on Image and Text Classification Across Multiple Uncertainty Estimation Models on Misclassicition and Out-Of-Domain Detection. It will be submitted to a journal.

RESEARCH EXPERIENCE

Uncertainty Estimation In Dialogue Summarization
Advisor: Hang Su

Key Researcher *May 2023 – Aug. 2023*

Project Goal: Develop uncertainty estimation models to assess the quality of generated text summarization.

My Responsibilities: Currently, I am researching models to enhance the accuracy of uncertainty scores for generated texts.

My Achievements: Our propsosed SiCF scores are effective on both uncertainty estimation and semi-supervised dialogue summarization. And we plan to submit a paper for ICLR 2024.

Key Techniques: BNN, Transformer, Contrastive Learning, Beam Search Sampling.

Uncertainty Estimation In Natural Language Undertanding
Advisor: Chang-Tien Lu

Key Researcher *Jan. 2019 – present*

Project Goal: Develop uncertainty estimation models to analyze misclassification and out-of-domain samples in text classification, few-shot text classification, and named entity recognition.

My Responsibilities: Develop models to enhance the accuracy of uncertainty scores for both document-level and entity-level classified results.

My Achievements: Enhancing confidence in uncertainty scores for text classification by considering three distinct uncertainty types (aleatoric, epistemic, and parametric uncertainty) and mitigating overconfidence in top scores. Employing uncertainty relations for adaptive learning of uncertainty scores. Published two papers in EMNLP and KDD, with experiment-finished work planned for ICLR 2024.

Key Techniques: Data augmentation, Few-Shot, CNN, RNN, BNN, Transformer, Contrastive Learning.

Zero-Shot Spoken Language Undertanding
Advisor: Kaisheng Yao

Key Researcher *May 2022 – Aug. 2022*

Project Goal: Leveraging audio-text and text-semantics pairs to train a spoken language understanding model without requiring any audio-semantics pairs.

My Responsibilities: Develop a multi-modal to address the zero-shot spoken language understanding model and benchmark the task.

My Achievements: Significantly enhanced zero-shot spoken language understanding performance compared to baselines by introducing cross-modal selective self-training (CMSST) to tackle sample imbalance and label noise. One paper has been archived and submitted to EMNLP 2023.

Key Techniques: Cluster, self-training, selective-learning.

Multimodal Dialogue System Advisor: Linfeng Song
Key Researcher *May 2021 – Aug. 2021*

Project Goal: Develop a multi-modal dialogue system capable of generating system responses by considering the current user query and historical context, which can include both text and image inputs.
My Responsibilities: Develop and enhance the performance of a multi-modal dialogue system.
My Achievements: On 1% data, significantly enhanced the performance of the multi-modal dialogue system compared to baselines by leveraging more fine-grained image information, including objects and their attributes, as well as incorporating OCR information from images.
Key Techniques: Multimodal Fusion, Transformer, Pre-trained Object Detection, Pre-trained OCR.

Semantic Inpainting On Segmentation Maps (SISM) Advisor: Chang-Tien Lu
Key Researcher *Aug. 2019 – May 2021*

Project Goal: Develop and enhance SISM models that focus on inpainting a masked area within a segmentation map based on the semantics defined by a target label, prioritizing coherence with the intended context.
My Responsibilities: Proposed more effective models to address the limitations of current global and local GANs in solving SISM, leveraging the unique characteristics present in segmentation maps.
My Achievements: Enhanced result consistency through the introduction of a novel multi-expansion loss, resulting in a significant reduction of noise pixels in the inpainted segmentation maps. Developed a novel metric to evaluate the semantic quality of the inpainted segmentation maps. Published two papers in ICCVW and Neurocomputing, respectively.
Key Techniques: GAN, Conditional GAN, Dilation Operation, and Image Processing.

Cross-Modal Retrieval Advisors: Bingpeng Ma & Qingming Huang
Key Researcher *Aug. 2015 – Feb. 2017*

Project Goal: Develop a model capable of retrieving results in one modality based on content similarity using queries from another modality.
My Responsibilities: Enhance the model performance in both single-label and multi-label settings.
My Achievements: Significant advancements achieved in cross-modal retrieval, including the development of a subspace learning model with two layers to iteratively learn a common space for multiple modalities and latent spaces for multi-label labels. Additionally, introduced a novel label representation in single-label scenarios by incorporating it into KPLS. Published three papers in ACM Multimedia, Neurocomputing, and a workshop.
Key Techniques: Dimensionality Reduction (PLS, KPLS), Matrix Derivations, Non-Linear Projection.

TECHNICAL SKILLS

Languages and Technologies: C++, Matlab, Python(including Numpy and **PyTorch**), Github, LaTex.

Traditional Machine Learning Models: Subspace Learning, Metric Learning, Reinforcement Learning, etc.

Deep Learning Theory and Models: CNN, GCN, GAN, Transformer, Attention, Contrastive Learning, etc.

WORK EXPERIENCE

NLP Research Intern Manager: Hang Su
Amazon AWS AI lab *May 2023 – Aug. 2023*

NLP & Audio Research Intern Manager: Kaisheng Yao
Amazon AWS AI lab *May 2022 – Aug. 2022*

NLP Research Intern Advisor: Linfeng Song
Tencent America *May 2021 – Aug. 2021*

Research/Teaching Assistant Advisor: Chang-Tien Lu
Virginia Tech *Jan. 2019 – Present*

SELECTED AWARDS

SIGKDD **Student Travel Award** 2023, Jul. 2023.
First-year **Fellowship Scholarship** Admission to U.Pitt, Aug. 2018 - May 2019
China National Scholarships(only awards for top 2% students), Sep. 2017
University-level Merit Student for **Six Consecutive Years**, Sep. 2011 - Mar. 2017
University-level Scholarships for **Three Consecutive Years**, Sep. 2011 – Jun. 2014
State-level First Prize of Chinese National Mathematical Modeling Contest, Sep. 2013
